

Baby-Cash Drawer Jarltech 8040

Baby-Cash Drawer Jarltech 8040 - Steel Cash Drawer with small sizes

The new mini-sized cash drawer Jarltech 8040 comes with extremely small dimensions of about 330x330x89 mm.

This model offers the same features that you already know from our proven cash drawer 8070 – fatigue over long term use is not an issue. Its eight coin compartments can be adjusted in size freely, and the five diagonal note compartments are naturally Euro compatible. Use the cheque compartment to insert receipts securely

– even with the drawer closed. The steel sheet cash drawer is equipped with a 3-step lock. The Epson standard interface for cash drawers connects the drawer to all commercial cash register printers. If you do not use a printer, you can simply use our external opening interface 8005. It triggers a relay over the serial or USB interface to send an opening pulse to the cash drawer.
